Introducing the **SHORTSTOPP® PE System**

What are you leaving on your line?

What's really left on your pipeline after you've completed a maintenance job? Probably more than you want.

With TDW's new SHORTSTOPP® PE System, your line's integrity is maintained since no squeezing is needed and the work area is minimal. The SHORTSTOPP PE System is built on proven, patented pressure control technology. With more than 80 years experience in maintaining pipelines around the world, TDW's latest product line provides you with an alternative to squeezing when repairing

or extending your PE gas pipeline system. When you choose the SHORTSTOPP PE System, you are able to work in a smaller excavated area than is required for a typical squeeze set-up. There also is less pipeline modification required, which saves time and money.

The SHORTSTOPP PE System is designed for use on polyethylene pipelines (SDR 11 thru 17) and is available in sizes 4- through 12-inch.

SHORTSTOPP® PE Plugging Fitting
4- through 6-inch

SHORTSTOPP® PE Bottom Branch Outlet Fitting
4- through 8-inch

SHORTSTOPP® PE Plugging Fitting
8- through 12-inch

SHORTSTOPP® PE Bottom Branch Outlet Fitting
8- through 12-inch

A typical squeeze operation leaves numerous fusions with multiple fittings, couplings and stress points on your pipeline, which jeopardize the integrity of your line. Now compare the TDW option...

The **SHORTSTOPP® PE System** features:

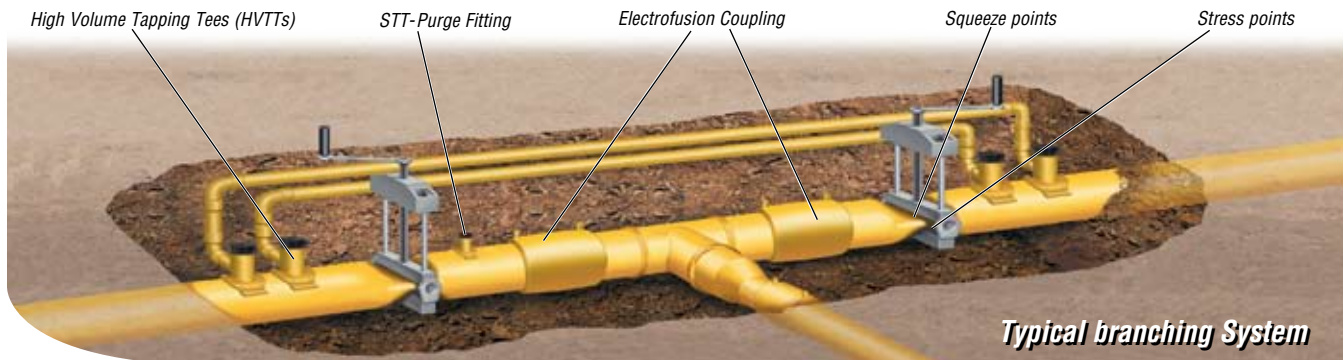

- **Smaller excavation and restoration area**
- **Special PE tapping machine**
- **Best isolation option**
- **Branch plugging capability**
- **Branching capabilities**
- **Bypass capability**
- **Electrofusion fittings**
- **Integral fitting clamp**
- **Threaded completion plug**
- **Minimal training**

TDW SHORTSTOPP® PE System

Existing SHORTSTOPP® equipment owners simply need to add products to complete the system. Or you can choose TDW's turnkey service option.

The TDW SHORTSTOPP® PE System allows for minimal excavation and fabrication which results in less labor and material, reducing your job cost.

Typical branching System
