with RealSeal® Cups
(10-inch size shown)

■ **5D2CC VANTAGE® V Batching Pig**
(12-inch size shown)

Description

VANTAGE® V Batching Pigs are multi-use pigs designed for batching, displacing and light cleaning of pipelines 10-inch and larger. Two- and four-cup configurations can be provided, as well as a disc/cup configuration.

The basic two-cup configuration will satisfy most new construction batching/displacing applications. A four-cup or disc/cup design is recommended for:

- Batching products with critical interface contamination points
- Displacing liquids on excessively long runs
- Traversing long-bowl checks and wedge gate valves.

The conical cup features a large wear surface, a cone shape and a small bolt circle. Cups and discs provide excellent sealing capabilities and flexibility. The pig is designed to traverse 20 percent reductions due to anomalies in the pipe without damaging the pipe or pig.

Features

The disc/cup configuration allows for additional batching and light cleaning. The disc also adds support to the pig, increasing the cup life.

All cups and discs are replaceable and can be interchanged or reconfigured. The VANTAGE V Batching Pig is rugged and easy to maintain. It features a consistent design throughout the size range and is available in several different standard configurations to meet most pigging applications.

The VANTAGE V Pigs are equipped with non-metallic bumpers to protect the bolts and prevent metal to metal contact during pigging operations.

Options

T.D. Williamson, Inc., is committed to providing you with the exact product to assist you in meeting your individual needs. The VANTAGE V Batching Pig is offered in several configurations.

- Two- or four-cup and disc-cup configurations can be provided.
- It is available in sizes 10-inch and larger.
- It may be equipped with a magnet kit to remove ferrous debris.
- It may be equipped with an adapter plate on which to mount a pig tracking transmitter.
- It may be equipped with dual diameter cups.
- RealSeal® Multi-Lip cups are available for increased seal effectiveness and wear life.

RealSeal® Multi-Lip Cup: Patented in the United States and in foreign countries.

VANTAGE® V Cleaning Pig

Sizes: 10-inch and larger

T.D. Williamson

Bulletin No: 3000.004.06

Version: 04.2011

Cross Indexing No: n/a

Supersedes: 3000.004.05 (02.2009)

■ DCDC-BR VANTAGE® V Cleaning Pig with brushes (12-inch size shown)

■ DCDC-BR VANTAGE® V Cleaning Pig with brushes and urethane nose bumper shown. (20-inch size shown)

Description

VANTAGE® V Cleaning Pigs are multi-use pigs equipped with either scraper discs/cups, cups, brushes or blade cleaning elements. The VANTAGE V is offered in eight different cleaning configurations. All cups and discs are replaceable and can be interchanged or reconfigured.

Features

All 16- through 42-inch VANTAGE V Pigs are equipped with a bypass hole option, which allows you to create a jetting action to improve cleaning effectiveness. Bypass ports can be provided on 10- to 14-inch sizes if requested. This pig is rugged and easy to maintain.

The conical cup features a large wear surface, a conical shape with a small bolt circle. The disc/cup configuration allows for additional cleaning. The disc adds additional support to the pig, increasing

the cup life. Cups and discs have excellent sealing capabilities and flexibility. The pig is designed to traverse 15 to 20 percent reductions due to anomalies in the pipe without damaging the pipe or pig.

Cleaning elements include brushes to remove hard, crust-like deposits, urethane blades for removing soft, gummy deposits, scraper discs to clean both hard and soft internal deposits, and magnet kits to remove ferrous material. All blades, brushes and scraper discs provide 100 percent circumferential cleaning.

The VANTAGE V pigs are equipped with non-metallic bumpers to protect the bolts and prevent metal-to-metal contact during pigging operations.

Options

T.D. Williamson, Inc. is committed to providing you with the exact product to assist you with your individual needs. The VANTAGE V Cleaning Pig is offered in eight configurations.

- Two-cup and several disc/cup configurations can be provided.
- Available in sizes 10-inch and larger
- May be equipped with a magnet kit to remove ferrous debris.
- May be equipped with gauge plates at a specified diameter and configuration.
- May be equipped with an adapter plate on which to mount a pig tracking transmitter.
- May be equipped with removable bypass plugs (standard on 16-inch and larger) to obtain jet cleaning.
- May be converted to a batching/displacement pig by removing the cleaning elements.
- RealSeal® multi-lip cups are available for increased seal effectiveness and wear life.
