

T-203 Tapping Machine

Sizes: 4- to 12-inch

Model T-203c

Bulletin No: **1000.003.03**

Date: 06.2024

Supersedes: 1000.003.02 (10.2019)

Description

Tapping machines are used to make connections to pipelines, tanks and plant piping and are used to make hot taps in preparation for plugging machine applications.

The T-203 Tapping Machine is used for making 4-inch to 12-inch (DN 100 to DN 300) taps without shutdown in pipelines, primarily for the installation of TDW SHORTSTOPP® Plugging Machines.

Features

The T-203 Tapping Machine has an adjustable automatic feed rate of 0 to 1/8" per revolution for any cutting condition.

The T-203 Tapping Machine operates at a maximum of 740 psi (50 bar) @ 100°F (38°C). Its operating temperature is -20°F (-29°C) to 180°F (82°C) @ 675 psi (46 bar). It weighs 241 pounds (109 kg), including the air motor drive, which is standard equipment. Lightweight with a low center of gravity, it is designed to be easy to handle and to operate.

The T-203 Tapping Machine also features a four-bolt attachment to the valve adapter. This provides a simple, rigid makeup with proper cutter alignment.

T-203 Tapping Machine
